

DockMaster™

Hydraulic Dock Leveler and Scissor Lift

The ***DockMaster™*** combines a dock leveler and scissor lift into one unit. This specialized product from Aaron-Bradley™ allows for both functions in one dock position. This eliminates the cost and space requirements of a dedicated dock position for a ramp, when dock to ground forklift access is required.

Features

- ***Hydraulic Dock Leveler:*** Designed for shipping and receiving, the DockMaster™ provides a service range of up to +/- 20" from dock height
- ***Hydraulic Scissor Lift:*** Allows the servicing of special truck heights above & below dock, and dock to ground access for forklift or materials. Service range of 0" (flush with grade) to a maximum of 72" above grade
- Includes solid state controls with PLC management and LED message indicators for all modes and functions
- Communication Light Package with Red/Green LED Lights & Driver Warning Signs
- The most versatile unit at any single dock opening
- Fully Hydraulic and ergonomic design does not require manual lifting or bending
- Designed for the most demanding applications requiring superior structural integrity, lasting dependability and operational functionality
